- The Science of Climate Change
- 2. Climate Policies and Regulations

Climate Change Fundamentals

NAVIGATE CLIMATE REGULATIONS, RISKS, AND OPPORTUNITIES

OVERVIEW

According to the Carbon Disclosure Project, unless immediate action is taken, an estimated \$4 trillion worth of assets will be at risk from climate change by 2030. As the world transitions to a low-carbon economy and governments around the globe implement regulatory frameworks and policies, it is increasingly important that employees understand what is driving these initiatives and how they will impact businesses, financial institutions, and their customers.

Climate Change Fundamentals begins by exploring the relationship between human activity and climate change, so that employees can engage their clients and colleagues more fluently.

Participants then learn how physical and transition risks can adversely impact businesses, financial institutions, and governments – and create opportunities to invest, lend, innovate, and strengthen their reputation.

The course also explores the commitments made by private sector businesses, governments, and non-governmental organisations (NGOs) and their role in driving the implementation of regulatory policies.

Throughout the course, participants study real-world examples of the successes and challenges organisations have experienced in their journey toward making their businesses sustainable and climate-resilient.

LEARNING OBJECTIVE

Learn about the climate-related issues, risks, opportunities, and regulatory frameworks underpinning the global transition to a net-zero economy.

PROFICIENCY GAINS

- → Understand the relationship between human activity and climate change.
- ightarrow Engage customers in discussions about the impact of climate change on their business.
- → Identify the risks and opportunities associated with transition and physical risks.
- → Explain the evolution of climate risk policies and regulations.
- → Discuss global climate policies and frameworks.
- → Interpret regulatory and voluntary climate risk disclosures.

TARGET AUDIENCE

→ Anyone seeking to develop their understanding of climate change and climate change-related regulations, risks, and opportunities.
